

## FOR IMMEDIATE RELEASE

### **Cordlife Philippines Elevates Stem Cell Safety with 24/7 Real-Time Lab Monitoring**

**Quezon City, Philippines - 2025 May** - Cordlife Philippines, the country's first private stem cell bank, has launched the latest advancement in its processing and storage facility: a 24/7 real-time laboratory monitoring system designed to enhance the safety of the stem cells stored at its facility in UP AyalaLand Technohub, Quezon City.

This upgrade allows Cordlife to continuously track critical laboratory conditions—such as the temperature and humidity of its critical equipment, primarily its cryogenic storage tanks—both on-site and remotely, ensuring that stored stem cells remain safe, viable, and ready for use following standard release procedures. The system is supported by a robust web-based dashboard that sends real-time alerts via email, SMS, and phone calls, backed by a three-tiered escalation protocol to ensure immediate response and issue resolution.

In addition to real-time alerts, the system provides automated reporting that supports better documentation and operational transparency—reinforcing Cordlife Philippines’ commitment to excellence and continuous improvement.

Multiple layers of backup systems, including power, connectivity, and alarms, have also been integrated to strengthen operational resilience. All enhancements are calibrated in compliance with international standards including ISO 17025 and the National Institute of Standards and Technology (NIST) in the United States.

“At Cordlife Philippines, your baby’s stem cell safety is our top priority,” said **Dang Vinh Do, Laboratory Director of Cordlife Philippines**. “This upgrade reaffirms our commitment to world-class, worry-free stem cell banking — every second of every day.”

This milestone coincides with Cordlife Philippines’ 16th anniversary, marking over a decade and a half of trusted service to Filipino families. As the only stem cell bank in the country with both **ISO 9001:2015 certification** and **AABB accreditation**, Cordlife continues to set the gold standard in stem cell processing and storage in the Philippines.

## About Cordlife Philippines

**Cordlife Medical Philippines, Inc. (Cordlife Philippines)** is a consumer healthcare company committed to helping people live healthier, happier, and longer lives through innovative and reliable medical solutions. Established in 2009, **Cordlife Philippines launched the country's first and only private umbilical cord blood processing and storage facility** in February 2010 at UP AyalaLand Technohub in Quezon City. It is also the first stem cell bank in the Philippines to achieve both **ISO 9001:2015 certification and AABB accreditation** (Association for the Advancement of Blood & Biotherapies), making it the first and only facility in the Philippines to have acquired such prestigious status.

Beyond stem cell preservation, **Cordlife Philippines** takes pride in the continuous expansion of its Diagnostics services, which now include **Cordlife Non-Invasive Prenatal Testing (Cordlife NIPT)**, **Cordlife Chromosomal Microarray Analysis Test (Cordlife CMA)**, and **Cordlife Baby Genetic Screening**.
